

Worksheet

2a) $V = \text{Abase} \times \text{length}$
 $= l \times w \times \text{length}$
 $= 8.6 \times 4.1 \times 14.7$
 $= 35.26 \times 14.7$
 $= 5183.2 \text{ cm}^3$

2b) $V = \text{Area of base} \times \text{height}$
 $= A_{\Delta} \times \text{thickness}$
 $= \frac{b \times h}{2} \times \text{length}$
 $= \frac{14.3 \times 7.8}{2} \times 2.8$

2c) $V = \text{Abase} \times \text{length}$
 $= l \times w \times \text{length}$
 $= 4.2 \times 2.1 \times 18.7$
 $= 8.8 \times 18.7$
 $= 164.9 \text{ cm}^3$

$= \frac{111.54}{2} \times 2.8$
 $= 55.77 \times 2.8$
 $= 156.156 \text{ cm}^3$

2d) $V = \text{Abase} \times \text{length}$
 $= \frac{b \times h}{2} \times \text{length}$

$= \frac{22 \times 6.1}{2} \times 3.5$
 $= 469.7 \text{ cm}^3$

3a) $V = \text{Abase} \times \text{length}$
 $= l \times w \times \text{length}$
 $= 6 \times 8 \times 8$
 $= 384 \times 3 \rightarrow \text{three cubes}$
 $= 1152 \text{ cm}^3$

3d) Shape Δ + Shape \square
 $= \text{Abase} \times \text{length} + \text{Abase} \times \text{length}$
 $= \frac{b \times h}{2} \times \text{length} + l \times w \times \text{length}$
 $= \frac{4 \times 3 \times 3}{2} + 5 \times 3 \times 4$
 $= 18 \text{ cm}^2 + 210$

3c) Shape 1:
 $= \text{Abase} \times \text{length}$
 $= l \times w \times \text{length}$
 $= 4 \times 4 \times 12$
 $= 16 \times 12$
 $= 192 \text{ cm}^3$

Shape 2:
 $= \text{Abase} \times \text{length}$
 $= l \times w \times \text{length}$
 $= 8 \times 6 \times 20$
 $= 960 \text{ cm}^3$

$= 210 + 18 = 228 \text{ cm}^3$

Shape 1 + Shape 2 = Total Volume = $192 + 960 = 1152 \text{ cm}^3$

A tent is in the shape of an equilateral triangular prism. How much space is there inside the tent?

$$V = A \text{ of } B \times H$$

$$V = 7 \times 10 \times 6$$

$$V = 70 \times 6$$

$$V = 420 \text{ ft}^3$$

∴ The tent has a volume of 420 ft³

$$H = \frac{\sqrt{3}}{2} a$$

$$a^2 + b^2 = a^2$$

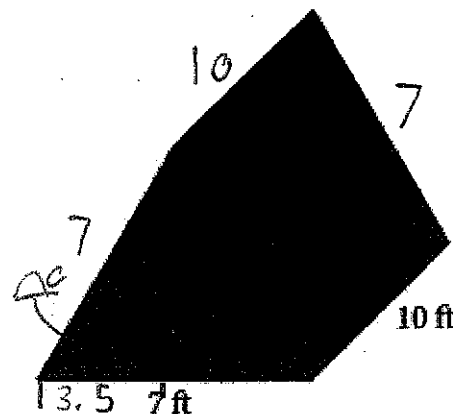

$$7^2 - 3.5^2 = a^2$$

$$49 - 12.25 = a^2$$

$$36.75 = a^2$$

$$\sqrt{36.75} = 6 \text{ ft}$$

$$H = 6 \text{ ft}$$

b) How much material was required to make the tent?

$$A_{\triangle} = \frac{7 \times 6 \times 2}{2} = 42 \text{ ft}^2$$

$$A_{\square} = 10 \times 7 \times 3 \text{ (identical rectangles)}$$

$$= 70 \times 3 = 210 \text{ ft}^2$$

$$S.A = 42 + 210$$

$$S.A = 252 \text{ ft}^2$$

∴ It took 252 ft² of material to make the tent.

CONSTRUCTION

The dimensions of a new greenhouse are shown below. How many cubic meters of space will the tree house contain?

$$V \text{ of shape 1} = A \text{ of } B \times H$$

$$V = (5 \times 3 \times 2) \div 2$$

$$V = (30 \times 2) \div 2$$

$$V = 30 \text{ m}^3$$

$$V \text{ of shape 2} = A \text{ of } B \times H$$

$$V = 5 \times 5 \times 3$$

$$V = 90 \text{ m}^3$$

$$V = 30 + 90$$

$$V = 120 \text{ m}^3$$
